DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?

Creating the function to set the html to create a preview of the image, and the author and title.

_____

2. What parts of encapsulating your logic were hard?

Trying to remember that certain sections of the code require "" or ''

_____

3. Is abstracting the book preview a good or bad idea? Why?

It is a good idea as now it basically now only encapsulates 2 core functions of creating the preview , aside from creating variables, I feel that setting variables are more of a pure function vs creating them.

_____
